

Setting up your patients on ASL:

STEP 1

Sign your patient up to ASL (MySL) in Dispense Works (if they have not been signed up before).

Ensure you verify the patient's identity and collect a mobile number for consent (100 points of identification required), or via the known patient model.

STEP 2

Find the patient in Dispense Works and retrieve their ASL (MySL) code.

Request Consent: Script Access | Script Upload

Scan here for instructions.

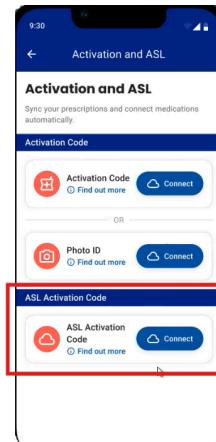

Once a patient is registered for an ASL, you can retrieve an ASL activation code from Dispense Works.

STEP 3

Supply the ASL (MySL) code to the patient (typically 6-7 characters).

We recommend asking the patient to input the code into their **MedAdvisor App (or app powered by MedAdvisor)** while still in the pharmacy. Advise your patient that the ASL code should be kept secure (treat it like a credit card PIN).

Note: New patients will still require a MedAdvisor Activation code along with their ASL code.

Scan here for existing patients.

Scan here for new patients.

STEP 4

Once connected, the MedAdvisor App (or app powered by MedAdvisor) will automatically update with the patient's prescription data.
