

## Release Notes

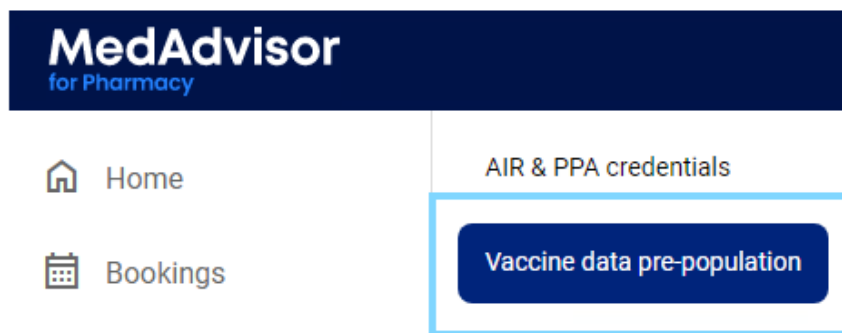

March 2026

### What's New:

#### Vaccine Data Pre-Population Settings

- Immunisation forms automatically populate vaccine data from the previously completed form of the same type, reducing manual data entry and improving workflow efficiency.
- New settings introduced to allow stores to manage this functionality:
  - Navigate to Patients > Service Settings > Vaccine data pre-population settings
- All forms have pre-population turned on by default (aligned with existing behaviour)
- Pharmacies can choose to turn this feature off based on their preference
- Click [here](#) for more information

Vaccine form	Pre-populate from last form
COVID-19 Vaccination	<input checked="" type="checkbox"/> On
Flu Vaccination	<input checked="" type="checkbox"/> On
Immunisation	<input checked="" type="checkbox"/> On

Save Settings

Updated 31st March 2026.

# What's New:

## Immunisation Updates

- Removed defunct quadrivalent flu vaccines from the system
- Updated available vaccine options, including:
  - Fluzone High Dose
  - Influvac
  - Fluzone

## You may have missed:

### Workflow Improvements

- **Simplified UTI antibiotic treatment entry** – If an antibiotic is supplied to a patient, it can now be recorded in the form by directly selecting the antibiotic from a radio list, with no additional data entry required.

*Note: Pharmacists must continue to adhere to their applicable state protocol.*

Pharmacists must select the appropriate antibiotic according to their state protocol and patient assessment. \*

<input type="radio"/> Nitrofurantoin (100 mg, 6 hourly, 5 days)
<input type="radio"/> Fosfomycin (3g, single dose)
<input type="radio"/> Trimethoprim (300 mg, daily, 3 days)
<input type="radio"/> Cefalexin (500 mg, 12 hourly, 5 days)

### UI & Usability Improvements

- **Patient Page Search Box** – Cursor now defaults to the search text box when entering the Patient page, saving time and improving workflow efficiency.
